**ADA has connection to day care**

By KIMBERLY SHERIDAN  
Times Staff

It's a connection that may not be obvious at first, but it's one that's becoming increasingly important for many families in the area. The American with Disabilities Act (ADA) is not just a law that governs public accommodations, but it also applies to day care centers. This means that day care centers must be accessible to children with disabilities, and this includes physical accessibility, as well as accessibility in the way that the center operates.

For example, a day care center must have a ramp leading to the building, a parking space for a wheelchair, and a bathroom that is accessible to a child in a wheelchair. Additionally, the staff must be trained to care for children with disabilities, and the center must have policies in place to ensure that all children are treated equally.

Parents of children with disabilities often face a lot of challenges when it comes to finding a day care center. They may have to travel a long distance to find a center that is accessible, and they may have to pay more for a center that is specialized in caring for children with disabilities. However, it's important for parents to know that their children have the right to attend day care, and that the ADA is there to help ensure that this right is protected.

**Halling spread of disease**

By KIMBERLY SHERIDAN

It's a common sight in many parts of the state: a herd of cattle being moved from one location to another. But for some, this is a sight that's filled with tension. The reason is that the cattle are being moved to a new location because of a disease that's spreading through the herd. The disease is called Brucella abortus, and it's a bacteria that can cause a variety of health problems in both humans and animals.

Brucella abortus is a zoonotic disease, which means that it can be transmitted from animals to humans. In humans, the disease can cause a variety of symptoms, including fever, joint pain, and fatigue. In some cases, it can also cause more serious complications, such as heart disease and neurological problems.

The disease is spread through the milk of infected animals, and it can also be spread through direct contact with the animals. This is why it's so important to take precautions when handling cattle, and why it's so important to ensure that the cattle are properly vaccinated against the disease.

**Local law enforcement runs cattle disease drill**

By KIMBERLY SHERIDAN  
Times Staff

It's a drill that's designed to test the ability of local law enforcement to respond to a potential outbreak of a disease in a herd of cattle. The drill is being conducted by the local sheriff's office, and it involves a variety of agencies, including the state health department and the state department of agriculture.

The drill is being conducted in a rural area, and it involves a herd of cattle that's been infected with a disease. The goal of the drill is to test the ability of the agencies to coordinate their efforts and to respond quickly and effectively to a potential outbreak.

The drill is being conducted over a period of several days, and it involves a variety of activities, including testing the cattle, tracing the disease, and coordinating the response. The agencies involved in the drill are working together to ensure that they are prepared to handle any potential outbreak of the disease.

**Big Brothers Big Sisters launches program to keep kids active**

By KIMBERLY SHERIDAN  
Times Staff

It's a program that's designed to help children with behavioral challenges stay active and engaged. The program is being launched by Big Brothers Big Sisters, and it involves a variety of activities, including sports, arts, and music.

The program is being launched in a rural area, and it involves a group of children who are struggling with behavioral challenges. The goal of the program is to help these children develop positive behaviors and to stay active and engaged in their communities.

The program is being conducted over a period of several weeks, and it involves a variety of activities, including playing sports, creating art, and performing music. The children are working with Big Brothers Big Sisters volunteers, and they are having a great time.

**Thursday winds blow semi off roadway**

By KIMBERLY SHERIDAN  
Times Staff

It's a scene that's not often seen on a highway: a semi-truck that's been blown off the roadway and is lying on its side. The truck was blown off the roadway by strong winds on Thursday, and it's now lying on its side in a ditch. The truck is a large semi-truck, and it's carrying a load of goods. The truck was on the highway, and it was traveling in the same direction as the wind.
