**Routine blood test saved baby's life**

**MCADD a silent killer for many**

A 14-year-old boy, who has been diagnosed with maple syrup urine disease (MSUD), a rare genetic disorder, is now healthy and thriving. The boy, who was born in 1999, was diagnosed with MSUD at the age of 14. His parents, Chris and Megan, were told that their son had a rare genetic disorder that could be fatal. However, a routine blood test at the age of 14 revealed the diagnosis. The boy's condition is a rare genetic disorder that affects the body's ability to break down certain amino acids. Without proper treatment, it can lead to severe complications, including brain damage and even death. The boy's parents, Chris and Megan, were told that their son had a rare genetic disorder that could be fatal. However, a routine blood test at the age of 14 revealed the diagnosis. The boy's condition is a rare genetic disorder that affects the body's ability to break down certain amino acids. Without proper treatment, it can lead to severe complications, including brain damage and even death.

LAT story and photos by Rachel Coleman

**A 'Match' made in heaven**

A group of friends, including a young man and a young woman, are shown in a photo. They are all smiling and appear to be at a social gathering. The young man is wearing a red shirt and the young woman is wearing a blue shirt. They are surrounded by other people, some of whom are also smiling. The photo is taken outdoors and appears to be at a party or a social event.
