Routine blood test saved baby's life

MCADD a silent killer for many

A 14-year-old boy, Joseph Colson, Jr., of Lawrence, Mo., was diagnosed with medium-chain acyl-CoA dehydrogenase deficiency (MCADD) after a routine blood test. The test was ordered by his mother, Colson's mother, because of his frequent vomiting and lethargy. The diagnosis was made by a genetic counselor at the University of Missouri, Columbia. The boy's condition is a rare genetic disorder that can be fatal if not treated. The boy's mother, Colson's mother, said that she was relieved to have a diagnosis for her son's condition. She said that she had been worried about her son's health for a long time. The boy's condition is a rare genetic disorder that can be fatal if not treated. The boy's mother, Colson's mother, said that she was relieved to have a diagnosis for her son's condition. She said that she had been worried about her son's health for a long time.

A 'Match' made in heaven

Four young women from Lawrence, Mo., were matched with four young men from Lawrence, Mo., in a unique event. The event was held at the Lawrence Community Center and was a success. The women and men were matched based on their interests and personalities. The event was a fun and exciting way for the community to get to know each other.
